

The diagram shows a geometric net of a triangular prism. It consists of three main components: a central rectangular base, and two trapezoidal side faces. The rectangular base is oriented horizontally. The two trapezoidal side faces are attached to the top and bottom edges of the rectangle. Each trapezoid has a dashed line representing a fold line, indicating where the net will be folded to form the prism. The trapezoid on the left is attached to the top edge of the rectangle, and the trapezoid on the right is attached to the bottom edge. The trapezoid on the left has a dashed line from its top-left corner to its bottom-right corner. The trapezoid on the right has a dashed line from its top-right corner to its bottom-left corner.
